Develop "Japanese Core Invoice Usage Specification" based on the international standard "Open Peppol" for the promotion of electronic invoices

Promote digital transformation (DX) from small and medium-sized enterprises to large companies through
public-private partnership

Source: EIPA December 2020 Press Release

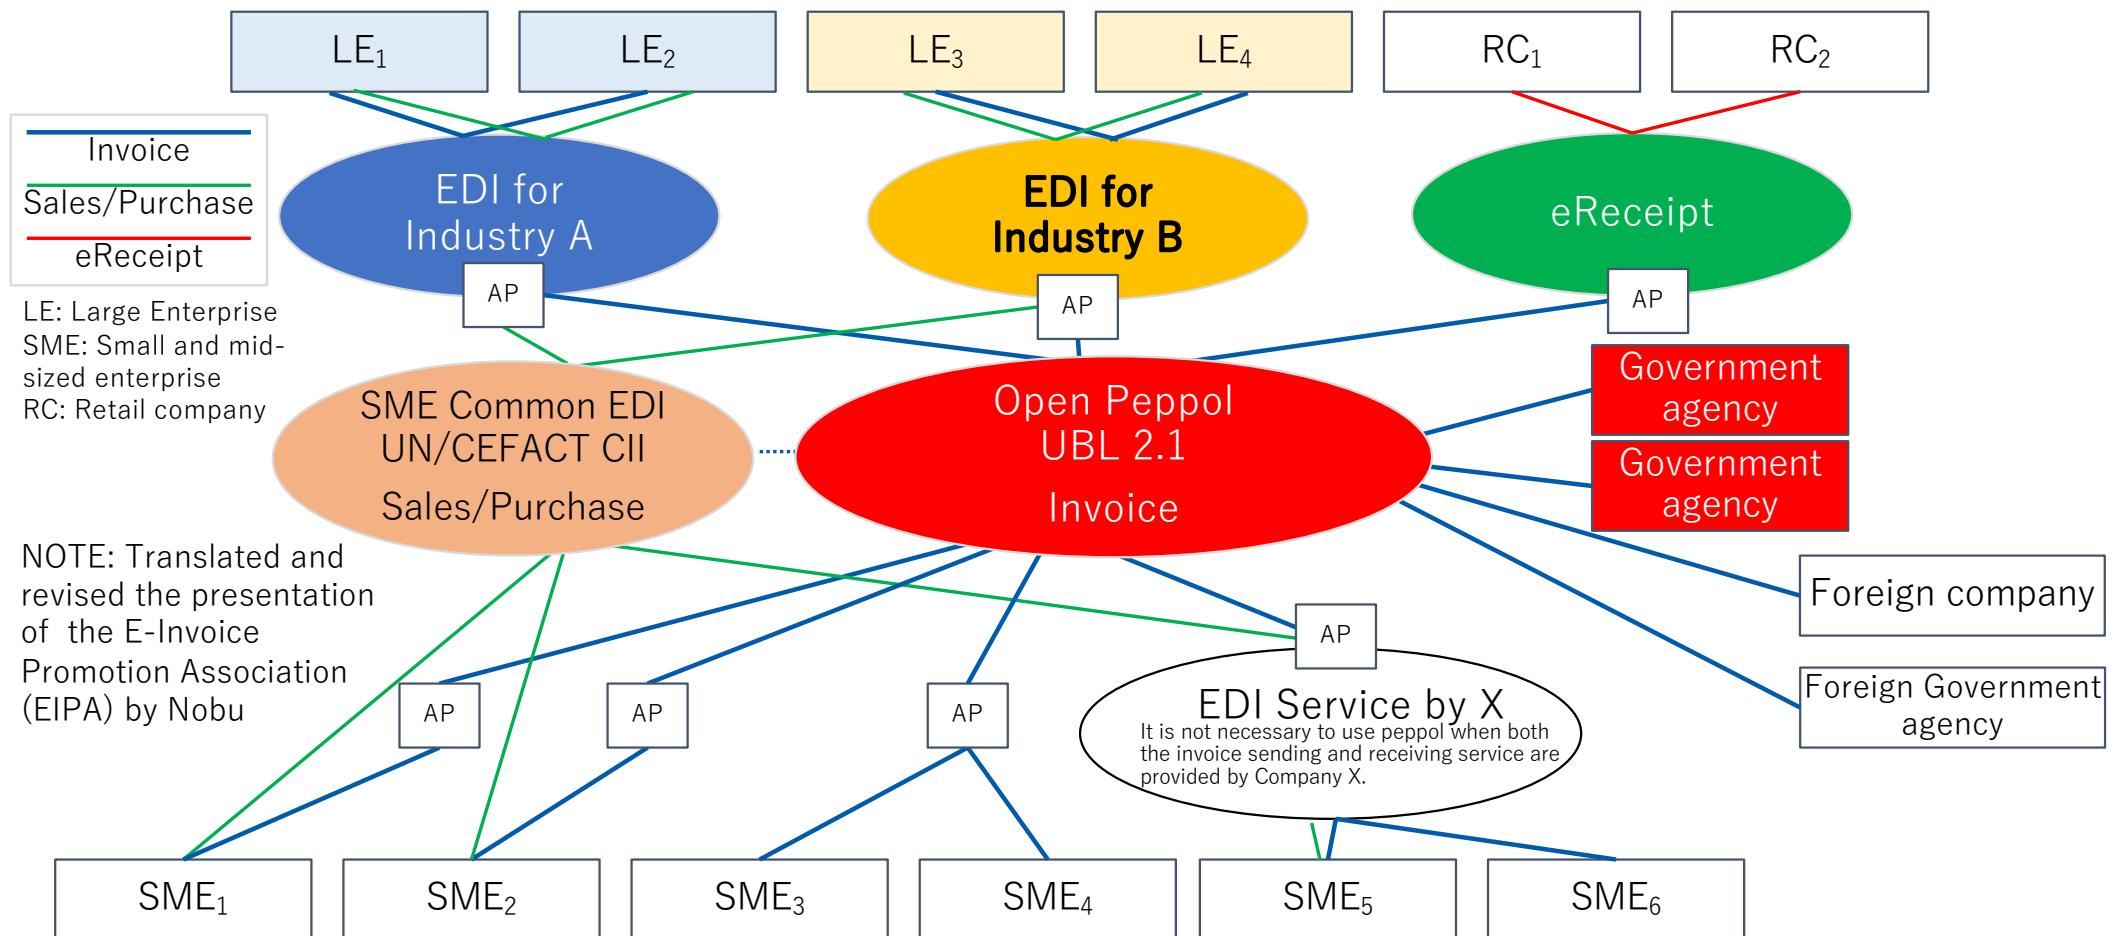

Toward the start of the qualified invoice (invoice system) in October 2023, it can be used widely, easily and at low cost from small and medium-sized enterprises to large enterprises, and in addition, global transactions. After selecting "Peppol" as the standard to be complied with, we decided to develop the "Japanese standard invoice" that correspond to Japanese laws and business customs.

Through the electronic invoice system, you will be able to smoothly send and receive e-invoices with domestic and overseas business partners. As a result, it leads to "digitization" such as automation of business processes as well as support for paperless invoice system, and businesses realize overwhelming efficiency and accurate processing in operations such as billing, payment, bookkeeping and filing.
